printf(): It is a predefined function available in stdio.h

it is the major output function in c.

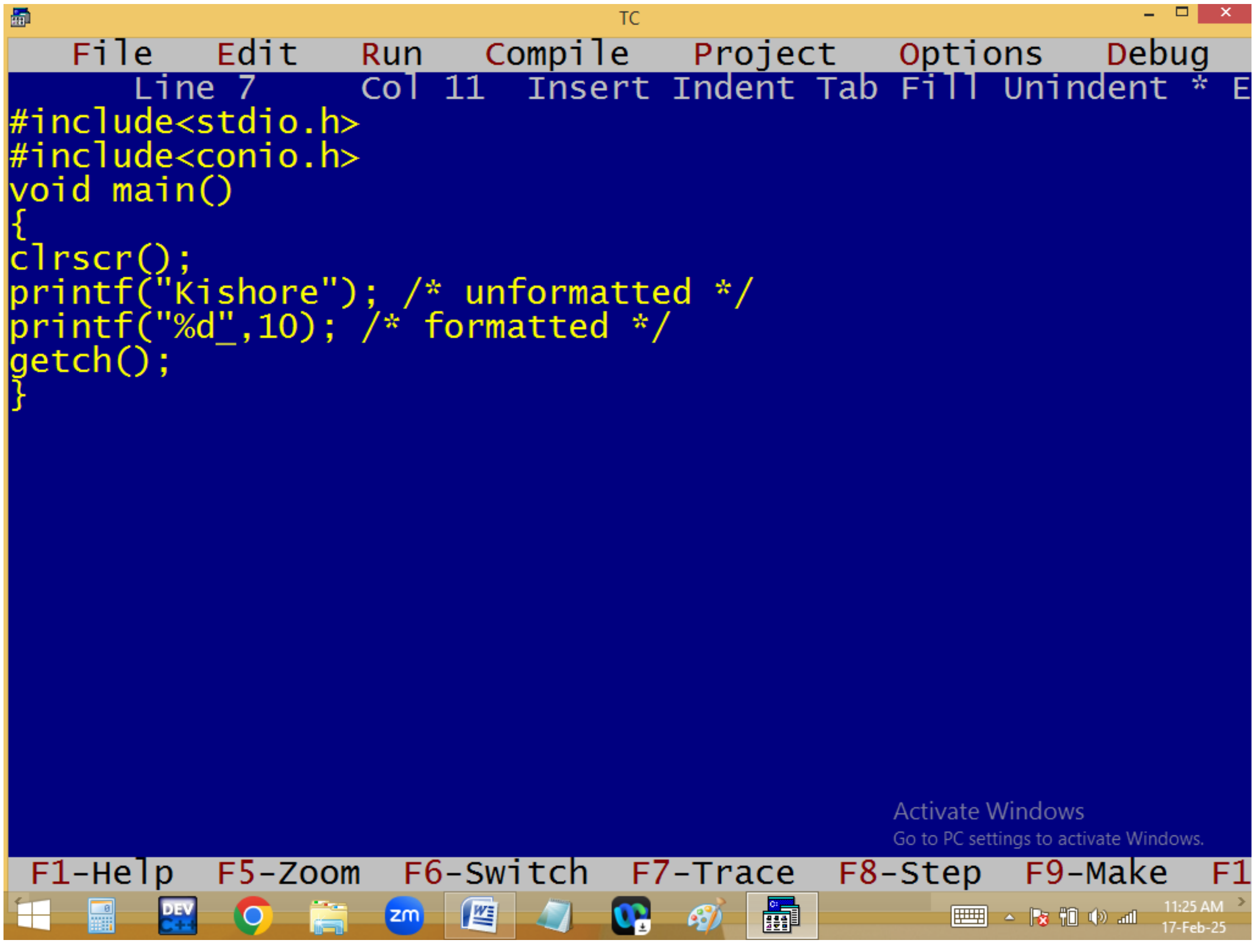
in printf, f means formatted.

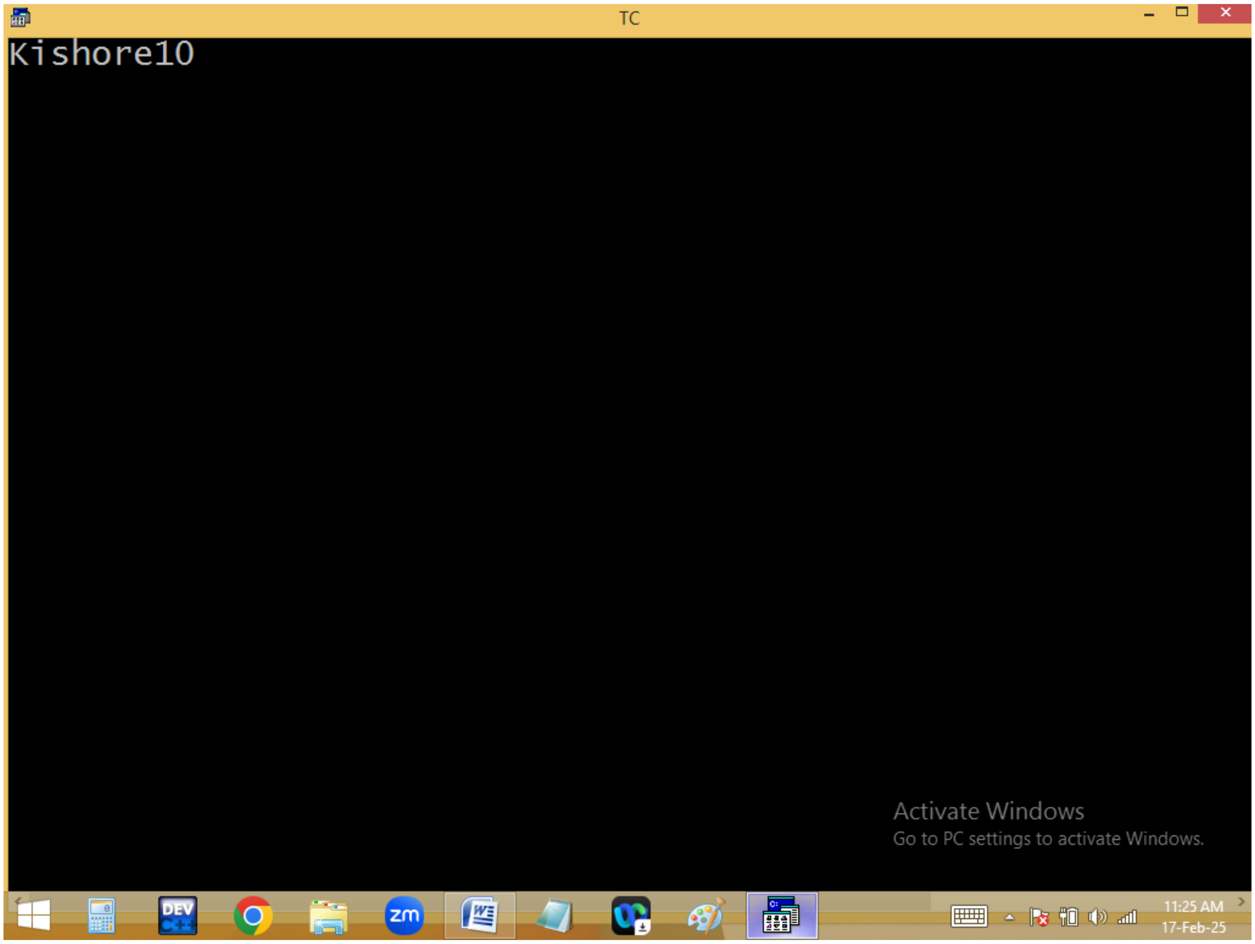
Printf always refers **standard output device** i.e. monitor.

Note:

1. Printf always return an int that indicates the no of printable characters.

2. Printf can perform both formatted and unformatted outputs.





3. In printf execution order is right to left and printing is left to right.
4. In printf the first argument should be in “ “.
5. In printf everything printed as it is except conversion characters and back slash characters.

Syntax:

int printf(“ **[**text**]** **[** conversion characters / format specifiers / format string **]** “ **[** , variables **]** **[** , expressions **]**);

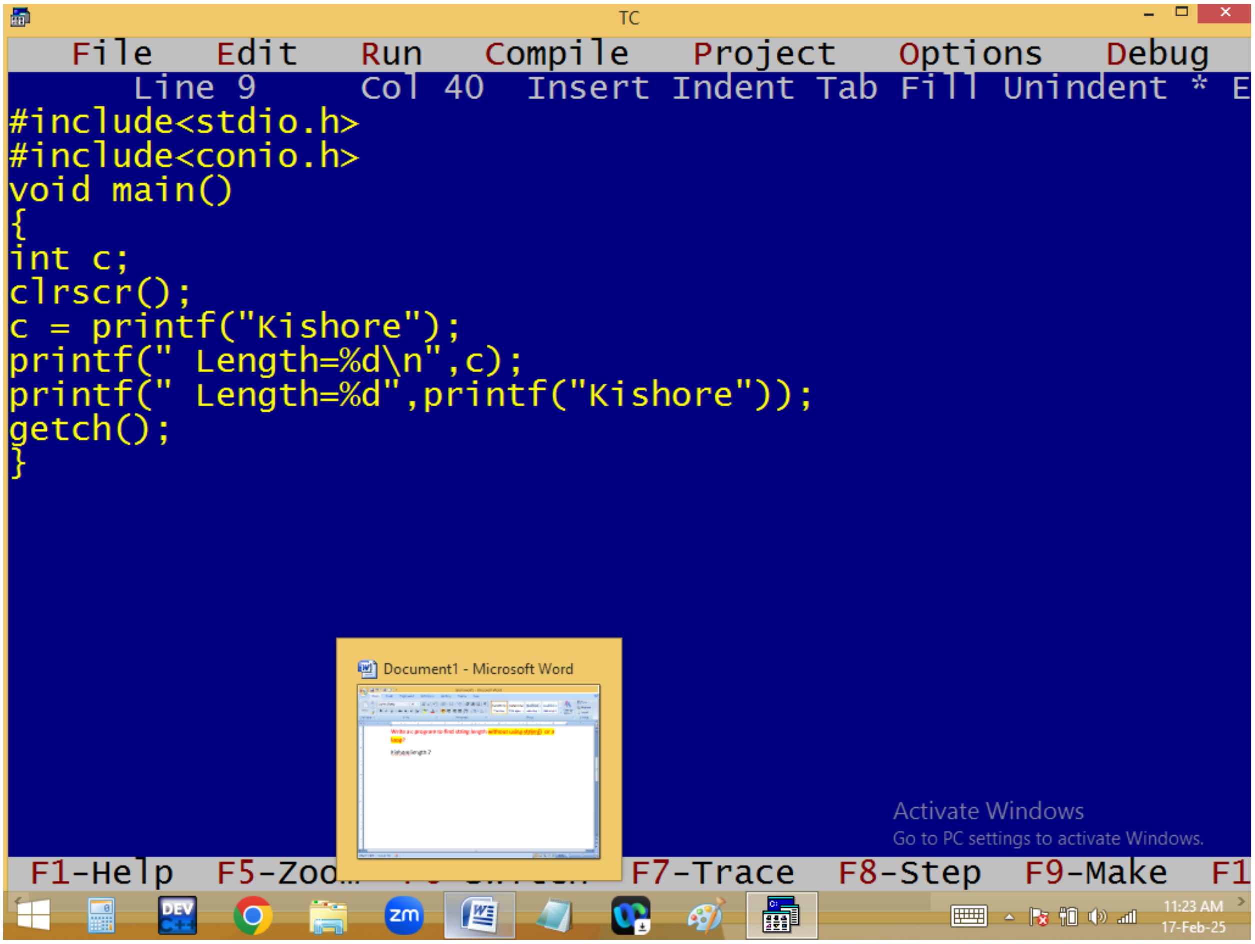
Write a c program to find string length without using strlen() or a loop?

Eg: Kishore length 7



TC

BACK SLASH / ESCAPE SEQUENCE CHARACTERS

They started with back slash [\ ].

They used to format the outputs.

They participated in program execution but not displayed in output. Hence they are also called **escape sequence characters**.

Each back slash character=**1 byte i.e. one character**.

BACK SLASH CHARACTER	**DESCRIPTION**
\a	Alert [beep sound]
\b	Back space
\n	New line character
\t	Tab space
\r	Carriage return[beginning of line]
\f	Form feed ♀
\v	Vertical tab ♂
\0	Null char
\\	\ [invalid]
\k	k [invalid]
